DETAILED ACTION

1. Information Disclosure Statement filed on 1/13/04 has been received.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-18, 29-32, and 36 rejected under 35 U.S.C. 103(a) as being unpatentable over Burgei et al (U. S. Patent no. 4,795,002) in view of DE 3904460.

Burgei et al discloses:

Motor 20, cable 36,38, brakes B, rotary member 28

Burgei et al does not disclose a continuous cable and a rotary member designed to actuate a continuous cable. DE 3904460 teaches a continuous cable and a rotary member designed to actuate a continuous cable (see figures 2 and 3). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a continuous cable and a rotary member designed to actuate a continuous cable as taught by DE 3904460 in the device of Burgei et al because it reduces the number and complexity of parts. It also reduces the stress on the cable since the force is applied along a section of the cable rather than at a point.

Art Unit: 3683

Regarding claims 5 –17, the claims are directed to different designs of the rotation member such as circular shape and constant radius. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have these design features as they are merely design choices. Regarding a 3d design, all the members are real objects and are therefore 3 dimensional objects.

Regarding claims 18, 29-32, Burgei discloses mounting means with arms 16,18 that shift based on rotation of the actuator.

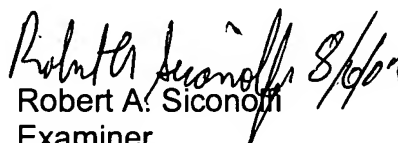

4. Claims 19-28 and 33-35 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3683
